ABOUT ME

Frontend Developer and UI/UX Designer passionate about building products that make complex tasks feel simple. From AI-powered tools and Chrome extensions to mobile apps and web platforms, I focus on creating intuitive user experiences that solve real problems. Experienced in translating ideas from concept to polished, user-centered interfaces through a combination of design thinking and modern web technologies.

EDUCATION

Bachelor of Science in Computer Science

Web Development, Software Engineering, Data Structures & Algorithms, Database Management, Python, Object-Oriented Programming, Artificial Intelligence.

2023-2026
Lyceum of the Philippines Cavite

STEM Strand—Senior High School

Focused on mathematics and analytical problem-solving.

2021-2023
National College of Science and technology

PROJECTS

Ternova — AI-Powered Outfit Recommendation System -

- Built an AI-powered Mix & Match recommendation system with weighted scoring algorithm (color, style, formality, weather, preferences) and Groq's Llama 3.8B for outfit critique; architected modular Riverpod state management with services for wardrobe management, color compatibility analysis, and explanation engine.
- Developed Ternova, a Software Engineering 1 & 2 capstone project, an AI-powered outfit recommendation application that helps users create clothing combinations based on personal preferences, style, color compatibility, formality, and weather conditions.

2025-2026
Lead Developer & UI Designer
Tech:
Flutter · Firebase · Groq (Llama 3.8B) · OpenWeather API

EngageAid — Service-Based Web Platform

- Developed a service marketplace platform for a startup, enabling clients to discover and connect with bookkeeping, web development, and accounting professionals.
- Led frontend development and UI/UX design, creating a clean, conversion-focused interface with strong information architecture, responsive layouts, and streamlined service browsing.

2026
Frontend Developer & UI Designer
Tech:
PHP · CSS · JavaScript

SOGIE Legal Advisory System

- Developed a rule-based expert system for SOGIE-related legal guidance using forward-chaining inference logic — built as a CS-Elective 3 project.
- Designed the case intake flow and result presentation UI, making complex legal scenarios accessible to non-technical users.

2026
Full-stack Developer
Tech:
HTML · CSS · JavaScript · Rule-based AI · Forward-Chaining Interface

Wadotisy — AI-Powered Reading Assistant

- Started as a hackathon prototype and later expanded into a fully polished product, developed Wadotisy, a Chrome Extension that simplifies complex online content through an AI-powered contextual chat experience.
- Designed the complete UI/UX, branding, and interactive side-panel experience for simplified reading with a focus on usability, accessibility, and user engagement..

2026
Frontend Developer
Tech:
JavaScript · HTML · CSS · Chrome Extension API · Groq API · Node.js

TECHNICAL SKILLS

Web Development:
HTML, CSS, JavaScript, TailwindCSS, React JS, PHP

Mobile App Development:
Flutter, Android Studio

UI/UX & Design Tools:
Figma, Canva

Database Management:
SQL, Firebase

Development Tools:
Git, GitHub, VS Code
